

Part C – Data Request

Table 1: Customer and Acquisition Data

Source: STADIOEquities' registration, account and demographic data.

Why it's necessary: Identifies customer characteristics and provides the baseline information needed to compare customers who activate with those who remain unfunded.

Column Name	Data Type	Example	Additional Information
Customer ID	String	STUE104582	Unique anonymised identifier used to join all datasets. Must be present in every dataset.
Registration Date	Datetime	2025-05-03 12:23:34	Date and time the customer registered on the platform.
Age	Integer	27	Age of customer at registration. Valid values: 18+.
Region/Province	Categorical	Western Cape	Province or region provided during registration.
Investment Goal	Categorical	Long-term growth	Customer's selected investment objective during onboarding.
Risk Appetite	Categorical	Moderate	Valid values should include all risk categories used by STADIOEquities.
Acquisition Channel	Categorical	Social Media	Source through which the customer was acquired.
Campaign ID	String	CAMP2025_04	Marketing campaign associated with acquisition, where available.
Acquisition Cost	Numeric	180.00	Cost incurred to acquire the customer. Currency to be specified.

Table 2: App & Web Behaviour

Source: App and website activity, including sessions, screens, feature usage and onboarding behaviour.

Why it's necessary: Helps identify behavioural patterns associated with customers progressing towards or failing to make a first deposit.

Column Name	Data Type	Example	Additional Information
Customer ID	String	STUE104582	Unique anonymised customer identifier.
KYC Status	Categorical	Complete	Valid values: Complete, In Progress, Failed, Abandoned.
KYC Completion Date	Datetime	2025-05-04 09:15:00	Null if customer never completed KYC.
Onboarding Step Reached	Categorical	Identity Verification	Furthest onboarding step reached by customer.
Step Status	Categorical	Abandoned	Valid values: Started, Completed, Failed, Abandoned.
Time Spent on Step	Numeric	12	Time spent on the step in minutes.
Failure Reason	Categorical/Text	Document Rejected	Reason for inability to complete onboarding step.

Table 3: Customer Behaviour Data

Source: Account and funding records, including deposits, withdrawals and balances.

Why it's necessary: Provides the key outcome data needed to determine whether, when and how customers make their first deposit.

Column Name	Data Type	Example	Additional Information
Customer ID	String	STUE104582	Unique identifier for linking datasets.
Session Date	Datetime	2025-05-06 18:42:15	Date and time session began.
Platform	Categorical	Mobile App	Valid values: Mobile App, Web.
Session Duration	Numeric	420	Duration of session in seconds.
Screens Viewed	Integer	14	Number of screens viewed during the session.
Deposit Page Viewed	Binary	1	1 = deposit page viewed; 0 = not viewed.
Deposit Attempt	Binary	0	1 = customer attempted a deposit; 0 = no attempt.

Features Used	Text/Categorical	Portfolio, Deposit	List or category of platform features accessed.
Days Since Registration	Numeric	2	Number of days between registration and session date.

Table 4: Funding and Deposit Data

Source: Marketing records covering acquisition channels, campaigns, costs, emails and nudges.
Why necessary: Helps determine whether acquisition sources and customer responses to marketing or nudges are associated with first-deposit activation.

Column Name	Data Type	Example	Additional Information
Customer ID	String	STUE104582	Unique anonymised identifier.
First Deposit Date	Datetime	2025-05-08 14:22:10	Null if no successful deposit occurred.
First Deposit Amount	Numeric	1000.00	Amount of first successful deposit. Currency to be specified.
Deposit Attempt	Binary	1	Indicates whether the customer attempted to fund the account.
Transaction Status	Categorical	Successful	Valid values: Successful, Failed, Pending, Reversed.
Failure Reason	Categorical/Text	Bank Authentication Failed	Completed only for failed transactions.
Deposit Method	Categorical	EFT	Include all payment methods used by customers.
Time to First Deposit	Numeric	5	Number of days between registration and first successful deposit.

Table 5: Marketing and Engagement Data

Source: Customer-service tickets, ticket reasons and customer queries.

Why it's necessary: Helps identify whether customer problems, questions or service experiences may be associated with customers failing to deposit.

Column Name	Data Type	Example	Additional Information
Customer ID	String	STUE104582	Unique customer identifier.
Campaign ID	String	CAMP2025_04	Unique campaign identifier.

Message Date	Datetime	2025-05-04 08:00:00	Date and time communication was sent.
Message Channel	Categorical	Email	Valid values: Email, SMS, Push Notification, In-App.
Message Opened	Binary	1	1 = opened; 0 = not opened.
Message Clicked	Binary	1	1 = clicked; 0 = not clicked.
Nudge Type	Categorical	First Deposit Reminder	Purpose of engagement message.
Nudge Response	Binary	1	1 = desired action taken; 0 = no action taken.
Days After Registration	Numeric	3	Number of days between registration and communication.

Table 6: Customer Support Data

Source: KYC and onboarding records, including completed, abandoned and failed onboarding steps.

Why it's necessary: Helps identify specific points in the onboarding process where customers may stall before making their first deposit.

Column Name	Data Type	Example	Additional Information
Customer ID	String	STUE104582	Unique anonymised identifier.
Ticket Date	Datetime	2025-05-05 11:32:00	Date and time support ticket was logged.
Ticket Reason	Categorical	Deposit Issue	Category assigned to support request.
Issue Type	Categorical	Technical	Valid values may include Technical, Banking, KYC, Account Query.
Response Time	Numeric	18.5	Time to first response in hours.
Resolution Time	Numeric	42.0	Time to resolution in hours.
Resolution Status	Categorical	Resolved	Valid values: Open, Resolved, Escalated, Closed.
Deposit Related Indicator	Binary	1	1 = issue relates to funding/deposits; 0 = otherwise.
